SUMMARY

Software engineer and product builder with seven years across software delivery, financial advisory and product. I build and deploy end-to-end products in regulated domains. Sanoria v1.0 is live on the App Store and v1.6.1 is under Apple review; Terravia has been submitted to Apple for review. SoloStall is deployed for its first customer, and its native iOS app is nearing App Store launch. Hands-on with TypeScript, Python, APIs, cloud services and Anthropic-powered LLM integration. Earlier commercial results include CHF 4M in client assets raised at FINKE Swiss and over CHF 300K in audit and retirement-plan sales at Planifique.

SELECTED PROJECTS

Sanoria — Personalized health and wellbeing app (iOS)

Personal project · 07/2026–Present · v1.0 live on App Store; v1.6.1 under review

- Built and published an iOS app that scores food against a user health profile and daily intake; includes 21 selectable profiles, food journal, recipes, sport and wellbeing tracking.
- Integrated Anthropic-powered LLM coach features behind an authenticated edge function; designed access controls and privacy measures for sensitive health data.
- Addressed App Store review requirements through v1.0 acceptance; v1.6.1 is currently under Apple review.

Stack: React 19, TypeScript/JavaScript, Capacitor 8, Supabase/Postgres, RLS, Deno Edge Functions, Anthropic API, HealthKit

SoloStall — E-commerce platform for independent creators

Customer product · 2026–Present · Platform live; first customer implementation deployed

- Designed, built and deployed a tailored store: storefront, catalog, inventory, Stripe payments, made-to-order requests, customer area and admin dashboard.
- Created an isolated shop environment per customer, including separate data and storage bindings; public platform and customer storefront are online. A native iOS dashboard companion with Apple push notifications is nearing App Store launch.

Stack: Next.js, React, TypeScript, Cloudflare Workers, D1, R2, Drizzle, Stripe, Better Auth, Resend; SwiftUI, WKWebView, APNs (iOS app)

Stock Scout Bot — Claude-assisted financial research

Personal tool · 2026 ·

- Built a Python workflow combining Claude CLI and financial data to generate company research, thematic analyses and HTML reports, with scheduled daily refreshes.

Stack: Python, Claude CLI, yfinance, pandas, macOS automation

Terravia — Where-to-live recommendation engine

Personal project · 07/2026–Present · iOS app submitted to Apple for review

- Ranks 122 destinations (107 countries and 15 US states) across 11 weighted pillars; combines World Bank and Wikidata data with a quality-control workflow that recorded 1,189 checks. The iOS app has been submitted to Apple for review.

Stack: Angular 22, TypeScript, Node.js, Express, REST APIs, Docker

Nexora — Multi-tenant HR SaaS for Swiss SMEs

Personal project · 04/2026–07/2026 · Local prototype; not deployed

- Built a full-stack HR prototype with 53 React pages, 56 Express route modules and 73 database tables, 64 tenant-scoped.
- Implemented Swiss payroll rules across all 26 cantons, a secured public API, TOTP 2FA, eight integrations and CI workflows.

Stack: React, Node.js, Express, SQLite, REST APIs, JWT, Zod, Vitest, Playwright, GitHub Actions

EXPERIENCE

Project Lead, Retirement Planning — FINKE Swiss

Geneva, Switzerland · 09/2025–06/2026 ·

- Specified and delivered the company CRM end to end, from functional and technical requirements to adoption.
- Advised and sold pillar 3a, vested benefits and retirement planning; raised CHF 4M in client assets.
- Wrote specifications and internal playbooks; aligned sales, operations and leadership.

Head of Tax & Product Development — Planifique

Geneva, Switzerland · 12/2021–02/2025 ·

- Built a financial and tax audit service from scratch: software, methodology, branding, pricing and sales.
- Sold 5–10 audits and retirement plans per month at CHF 2,000–4,000 each, generating over CHF 300K in revenue.

Web Developer / Mobile Application Developer — Sopra Steria

Lyon, France · 09/2019–08/2021 · Work-study

- Delivered Java web applications for the French National Health Insurance in Agile squads; built mobile apps and PWAs for bioMérieux using Angular, React, Vue.js, Java, SAPUI5 and Fiori Elements.

SAP Technical Consultant — TVH Consulting / Cadexpert

Lyon, France · 09/2018–09/2019 · Work-study

- Client support, incident management, ABAP development, SAP fixes and technical documentation.

Mobile Application Developer — Calaosoft / W3+

France · 05/2017–08/2018 · Internships

- Built medical calculators and mobile applications with Angular, Node.js and Cordova, from mockups through delivery and demo.

SKILLS

Engineering: JavaScript, TypeScript, React, Angular, Node.js, Express, Python, Java, SQL, PostgreSQL, SQLite, Supabase, REST APIs, Capacitor

AI & automation: Anthropic API and LLM integration, prompt engineering, AI-assisted development

Quality & delivery: Git, GitHub Actions, Vitest, Playwright, Docker, Cloudflare, Netlify, Sentry

Security & domains: RLS, JWT, TOTP 2FA, Swiss payroll and social insurance, retirement planning, CRM rollout

EDUCATION & LANGUAGES

Engineering Degree in Computer Science, mobile specialization — Science U, Lyon · 2016–2021 (work-study)

AFA Certification — In progress · Languages: French (native), English (fluent), German (intermediate)
